

Twitter

San Francisco, CA, United States

October 7, 2020

To whom it may concern,

I am inquiring about the currently available Network Engineer II position posted on LinkedIn.

I currently am an Associate Network Engineer at LogMeIn in Goleta. My previous experience strongly relates to the work Twitter is doing to give everyone the power to create and share ideas. I am the lead developer on the IT Network team and have designed, built, and maintain custom python based software platform, used for distributed network device configuration, verification, and deployment . In addition to my current role, I previously worked supporting a wide range of systems including Windows and Linux servers, NAS and SAN storage, and end user support.

Constantly learning and pushing my technical knowledge and abilities is important to me, and working with the Twitter team would allow me to do just that. The combination of my current skills and my desire and ability to quickly learn new skills will allow me to become a valuable asset to your team while giving everyone the platform to share ideas and information instantly without barriers.

I look forward to discussing this opportunity further and can be reached by email at mtbales@fastmail.fm.

Sincerely,

Michael Bales
